DATA QUALITY & STATISTICAL EVIDENCE

Data Integrity | Statistical Significance | Linkage Limitations | Audit Controls

METHODOLOGICAL LIMITATIONS

- Seller linkage is incomplete: only 340 of 656 mature deals (51.83%) could be linked to order records.
- Observed activation is not equivalent to true non-activation for unlinked sellers.
- Advertising spend by acquisition origin is unavailable, so channel ROI cannot be calculated.
- Acquisition-origin comparisons are observational and do not establish causality.
- The 90-day maturity cutoff uses a minimum threshold of 50 orders per day, excluding 186 immature deals.
